

ANALYSIS REPORT 2021-22

An effective feedback system from the various stakeholders is indispensable for the holistic growth of an Institution. Feedback is collected from the students, teachers, alumni and parents that is four stakeholders out of five. A good number of the respondents respond and information is collected and analysed. There are various questions covering various aspects of curriculum on which feedback is taken from them separately. Rating scale of 1-5 is created to measure the intensity and frequency of responses. Average score is calculated for each aspect which is examined through questions and overall average score is calculated by analysing every aspect. Pie charts are used for tabulation of data. Generally average score is found more than 75-80 of all aspects for which feedback is taken. After analysing the feedback data, all the aspects whose average score is low they are reviewed, and action plan is decided to improve the score in that particular aspect. Separate questionnaires have been created and used for feedback purpose for students, teacher, alumni and parents.

An analysis of overall feedback reveals that by and large all the stakeholders were satisfied with the overall performance of the college, in terms of student's output. However, the grouse of parents with regards to availability of resources, text books, reference books, has been taken care of. For the transformation and personality development of the wards personality development classes have been organized by various departments. Students are also given special attention/guidance to pursue higher studies/research in mentor-mantee meetings.
